

Microgrids SIG

Join our [mailing list](#).

Development of open source software components for Microgrids to solve for network resilience, power quality, efficiency, stability, reliability and investment optimization when connecting Renewable Energy Sources (RESS) / Distributed Energy Generation (DER).

Currently, we are reviewing software multiple open source microgrids for use cases and interoperability. The intention is to chart a plan for 2021. Please join us.

The group is meeting bi-weekly at 4:00p PT. Please check the [calendar](#) for meeting information.
