

LF Energy Projects

LF Energy's technical projects are organized underneath the [Technical Advisory Council](#) in order to create specific software or services. Project chairs or leaders report up to the TAC, and projects at the Early Adoption or Graduated [maturity level](#) vote on TAC business.

Projects are distinct from technical working groups, which meet to develop or explore specific functional areas, or Special Interest Groups, who meet regularly for discussions but do not have a specific charter.

Current Projects

Below is the listing of current projects hosted by the LF Energy Foundation. Click the logo to learn more about each project and scroll down on the pop-up to see additional details.
