

Meetings 2023

Meeting 26-07-2023 16:00

Attendees

- Erdem Gümrükcü
- Florian Oppermann
- Juan Adolfo Galeano
- Ghassen Nakti
- Mattia Alfieri
- Ciro Cavacchini
- Federico Paolantoni

Discussion & Action Items

Item	Notes
Feeding CIM-formatted real-time measurements to SOGNO services	<ul style="list-style-type: none">• VILLASnode is highly recommended as it is a flexible gateway with several supported protocols (https://fein-aachen.org/en/projects/villas-node/) but it is not the only solution• Alternative approaches that suit with the targeted SOGNO architecture are welcome
Areti feedback on pyvolt	<ul style="list-style-type: none">• pyvolt lacks meaningful logs from an electrical point of view:<ul style="list-style-type: none">◦ Usual suspect is the network topology (e.g. lack of slack bus)<ul style="list-style-type: none">▪ pintura service could be used to visualize the network with the purpose of topology-check▪ Another test could be performed by importing the same network topology (given in CIM format) to another power flow simulator and see if it is working.◦ Short term improvement plan:<ul style="list-style-type: none">▪ Try to reproduce the error(s) for further analysis of the problematic scenarios▪ Users are encouraged to suggest solutions via pull request• Endless loops that saturate system resources<ul style="list-style-type: none">◦ To manage this exception, areti introduced a threshold inside the pyvolt logic (pull request)• Suggestion: pyvolt should be capable of running multiple islands in a single instance <p>The problems originating from network should be logged properly. Currently, it is difficult for non-electrical engineers to overcome such problems. This can put limits on the applicability of SOGNO services.</p> <p>RWTH will look for funding opportunities to dedicate developer resources for improvement of logging.</p>
Discussion items	<ul style="list-style-type: none">• Microgrid flexibility management service --pymfm-- will be ported to SOGNO after official end of Platone project• EV routing service --evrich-- will be ported to SOGNO soon• Florian is working on network state visualization. It will be possible to see a colormap indicating the existing loading of network sections in real-time.
Organization	<ul style="list-style-type: none">• August meeting will be cancelled due to low expected attendance

Meeting 27-06-2023 17:00

Attendees

- Erdem Gümrükcü
- Gonca Gürses-Tran
- Francesco Rizzi
- Ciro Cavacchini
- Alberto Patrizi
- Federico Paolantoni

Discussion & Action Items

Item	Notes
Introduction of new members	<p>Francesco, Ciro, Alberto from ARETI working on the ADMS project</p> <p>Gonca working on deployment of SOGNO as the DMS for Fraunhofer grid</p>
Overview of the ADMS project of ARETI	<ul style="list-style-type: none"> • Goal: Run power flow and state estimation based on measurements • Desired final view: <ul style="list-style-type: none"> ◦ SCADA provides measurements with 10-min updates ◦ Kafka handles message brokering in the CIM format ◦ Relevant microservice reads messages
Discussion items	<ul style="list-style-type: none"> • Are there reference implementations to show communication of formatted (e.g. in CIM) measurement/data between microservices and external components? <ul style="list-style-type: none"> ◦ villas framework (https://villas.fein-aachen.org/docs/node/) provides references. In the past it was used to communicate measurement-placeholders (i.e. dpsim outputs) ◦ dpsim-pyvolt demo (https://github.com/sogno-platform/example-deployments/tree/main/pyvolt-dpsim-demo) could be relevant • Where should one develop new state estimation algorithms? in pyvolt
Organization	<ul style="list-style-type: none"> • Monthly meetings will be kept at 4th Tuesday of every month • Meeting time to be shifted to 4pm

Meeting 28-03-2023 17:00

Attendees

- William Bariselli
- Erdem Gümrükcü
- Florian Oppermann
- Katia Di Pace
- Federico Paolantoni

Discussion & Action Items

Item	Notes
Introduction of new members	Katia and Federico from ARETI
Outreach / Marketing	Future collaboration opportunity with Shell. The representative will be invited to the next TSC meeting.
Development updates	<p>William and Floria will offline to identify the optimum architecture to implement kafka in SOGNO.</p> <p>In the future, SOGNO documentations and artifacts will be updated based on the needs of kafka extensions.</p>
Organization	<ul style="list-style-type: none"> • William will clarify the institutional storage. • Investigation of pyvolt's computation requirement (i.e., how much storage/CPU is needed to solve SE problems with X number of network nodes)
Uncovered agenda items	<ul style="list-style-type: none"> • Feedback from TAC review • Pull request for FledgePower • OpenSSF Best Practice Badge • The running demo in OpenStack

Meeting 28-02-2023 17:00

Attendees

- William Bariselli
- Giuseppe Cofano
- Erdem Gümrükcü
- Juan Adolfo Galeano
- Florian Oppermann

Discussion & Action Items

Item	Notes
Introduction of new members	Florian and Fito (Juan) from RWTH Aachen
Outreach / Marketing	Video documentation: A series of videos will be produced for certain SOGNO projects in Platone. Step-by-step starting from highest level (i.e., definition and purpose of the project) to lower levels (i.e., deployment details).
Related research project	In Horizon EU project FLOW, RWTH is developing a routing service for electric vehicles (in charging hubs with multiple CPOs).
Development updates	<p>Kafka development aims to increase horizontal (between multiple SOGNO instances running at different nodes) and vertical communication (with other platforms e.g. FledgePOWER) capabilities of SOGNO.</p> <p>There exist multiple Kafka offerings available. For SOGNO integration, a proper choice must be done. The priority is to avoid vendor lock-in. TO-DOS in this regard:</p> <ul style="list-style-type: none"> • William will initialize a document to list the message bus requirements and involve ARETI. • Florian will look for pros/cons of available offerings.
Organization	<ul style="list-style-type: none"> • William will clarify the institutional storage. • LF SOGNO will be presented in the next Technical Advisory Committee meeting.

Meeting 24-01-2023 17:00

Attendees

- Markus Mirz
- William Bariselli
- Giuseppe Cofano
- Antonello Monti
- Erdem Gümrükcü

Discussion Items

Item	Notes
Outreach / Marketing	<p>SOGNO blog post: https://www.lfenergy.org/meet-the-lf-energy-sogno-project/</p> <p>Enlit: SOGNO based demo by several EU projects</p>
Related research projects	<p>SOGNO components are developed in EdgeFLEX, Platone and BeFLEX</p> <p>Edgeflex</p> <ul style="list-style-type: none"> • Darren prepared an overview of the architecture being implemented in the Edgeflex project architecture: https://drive.google.com/drive/folders/1BCfaoRdM1K-K92V4_xYKMeIHBBxNtrJY?usp=sharing
Related LFE projects	<p>FledgePOWER demo setup</p> <ul style="list-style-type: none"> • DPsim / villas to FLEDGE via 104 demo running, FLEDGE not containerized yet • DPsim / villas demo container images updated (huge-pages not necessary anymore)
Project development boards	Current work streams are collected in the project board on GitHub: https://github.com/orgs/sogno-platform/projects

Other development updates	<p>API development</p> <ul style="list-style-type: none"> • basic implementation of simulation and prediction API available, deployment files to be finalized (example-deployments) <p>Contributions</p> <ul style="list-style-type: none"> • ARETI (vagrant) and Google Cloud (istio/anthos) PRs received and merged into project branches
Organisation	<ul style="list-style-type: none"> • Markus moved all meeting minutes from github and google drive to this wiki • Erdem and William are exploring options to store media files, like videos and slides. Google drive is convenient for slides because they can be edited online but we would need a "neutral" google drive folder by LFE. Jon is the best contact regarding this topic and general infrastructure questions.
